

Lexile[®] Titles Database

Connect Your Customers to Just Right Books

Give millions of students, families and teachers the information they're looking for with the world's most widely used reading metric.

What is the Lexile Titles Database?

The Lexile Titles Database is a growing collection of Lexile-measured English and Spanish ISBNs identifying books, book editions and book-like products from more than 600 publishers. Licensing the Lexile Titles Database provides access to Lexile[®] text measures for more than 490,000 hardcover, e-books, paperback, and trade books from hundreds of publishers.

With the Titles Database, you can:

POPULATE book data, library records, websites and catalogs with Lexile measures.

MATCH your customers to the books that are the right fit for them.

CREATE searches based on Lexile measures and other bibliographic data.

ACCESS our ever-expanding database of ISBNs immediately after updates are made.

“ The Lexile Titles Database provides us with data needed to keep our content up to date and relevant, along with all the critical Lexile level information required by our teacher partners. It's an incredible value-add to our program. ”

— Debra Marcionette, M.A. Ed., CTO, Book Taco

How does it work?

The Titles Database is offered as a CSV download or Application Programming Interface (API) for English and Spanish ISBN data. You can retrieve the entire database of Lexile measured ISBNs, get only the new results since your last query, or, with the API, get customized data by choosing filters reflecting your interests.

What's in the Database?	
	Lexile measure for each book
	Bibliographic information like Title, Author(s), publisher, ISBN/ ISBN13
	Book summary
	Book attributes like page count and book type (nonfiction vs fiction)
	Additional book details if it is part of a series or has won any awards
	For early-reading books, information on which text characteristics make a book challenging

Who uses the Titles Database?
